DESOGERME MICROCHOC

THE MULTIPURPOSE DISINFECTANT
FOR ANIMAL BREEDING

- ✓ Can be used in the presence of animals*

In hatcheries, production houses for laying hens, breeding centres...

- ✓ Approved in more than 20 countries:

France, Algeria, Egypt, Saudi Arabia,
Iran, Thailand, Morocco, Tunisia...

- ✓ Manufactured in France

European Active Substances

- ✓ Compliant with European Biocidal
Products Directive 98/8/CE

- ✓ Effective on Coronavirinae (Infectious ronchitis
Virus (IBV), Avian flu, etc.), on Herpes Viruses
(Marek's Disease, Aujesky Disease...)

- ✓ Can be used on surfaces that come into
contact with food of animal origin**

Abattoirs, the meat-processing industry and
transportation

DESOGERME MICROCHOC

THE MULTIPURPOSE DISINFECTANT
FOR ANIMAL BREEDING

- ✓ ECONOMICAL: USE AT 2%.

USAGE DOSES FROM 5L TO 11L PER 1,000 M² ON FLOORS
(ACCORDING TO THE SURFACE AREA, MATERIALS AND QUANTITY OF WATER USED).

- ✓ Can be used via thermonebulization:

We advise use via thermonebulization during the final disinfection stage 48 hours prior to the arrival of the animals, at a dosage of 1.5 ml/m³

- ✓ Can be used in hatcheries:

Dosage 1.5ml/m³ (incubator and hatcher).
The use of DESOGERME MICROCHOC is recommended for these installations throughout the incubation and hatching cycles

- ✓ Approved for the disinfection of livestock buildings, livestock equipment and transportation installations

- ✓ Amber-coloured liquid, non-flammable
Density at 20°C: 1.00 ± 0.02,
pH of the concentrated solution: 4.7 ± 0.5,
pH of the solution diluted at 1%: 7 ± 0.5.

- ✓ Three active substances to avoid microorganism habituation and resistance

- ✓ Formulation :

- 100 g/L Glutaraldehyde
- 100 g/L Chlorure d'Alkyl Dimethyl Benzyl Ammonium
- 28 g/L Chlorure de Didecyl Dimethyl Ammonium

EFFICACY TESTS

BACTERICIDE Tests (in accordance with standard NF EN 1656 and/or NFT 72-151)

Escherichia coli *	0,1%
Pseudomonas aeruginosa	0,125%
Salmonella sp *	0,5%
Staphylococcus aureus	0,05%
Enterococcus faecium	0,05%
Listeria Monocytogenes	0,25%
Enterococcus hirae	0,012%
Mycobacterium smegmatis	0,150%
Enterococcus hirae	0,012%

*Main bacteria responsible for cases of human infection (See: AFSSA / INTERNET)

FUNGICIDE Tests (in accordance with standard NF EN 1657 and/or NFT 72-201)

Absidia corymbifera	2,0%
Cladosporium cladosporioides	1,0%
Aspergillus versicolor	1,5%
Aspergillus niger	2,0%
Candida albicans	2,0%
Staphylococcus aureus	0,075%

VIRUCIDE Tests (in accordance with standard NF EN 14675 and/or NFT 72-180)

Gumboro virus	0,5%
Aujeszky virus	0,25%
Marek's disease virus (MDV)	0,25%
Parvovirus (Infectious Canine Hepatitis)	0,75%
Coronavirus (Infectious Bronchitis)	0,1%
Newcastle virus	0,2%
Influenza H1N1	0,2%
Myxomatosis virus	0,2%
Talfan virus	2,0%
Foot and mouth disease	2,0%
Bacteriophages (4 colonies)	0,75%
