

CEFI PRO

REAL BREWERS YEAST

Yeast hydrolysate – for an optimal and efficient supply of active agents for young animals

CeFi[®] PRO consists of the cell contents and cell walls of brewers' yeast which are released from their natural compound by gentle and effective hydrolysis, so that the individual cell components can optimally develop their effect. Beta-glucans and mannan-oligosaccharides (MOS) from the cell wall, in combination with the

natural RNA constituents, nucleotides, nucleosides, as well as the pyrimidine and purine bases of the brewers' yeast, guarantee the high impact of CeFi[®] PRO.

Thus, CeFi[®] PRO is in a position to support the natural processes of cell regeneration and cell reproduction, and in particular to speed it up in stressful situations.

Effects of CeFi[®] PRO on poultry:

 Supports the development and integrity of the intestinal mucosa

 Increases growth due to high bioavailability

 Promotes cell regeneration and cell reproduction

 Improves immunity and resistance to infections

CeFi[®] PRO recommended usage:

2–10kg/t in complete feed (0.2–1.0%)

- ◆ for laying hens
- ◆ for broiler chickens
- ◆ for turkeys
- ◆ for geese
- ◆ for ducks

CeFi[®] PRO ingredients:

100% brewers' yeast (*Saccharomyces cerevisiae*)

Analytical constituents and levels

Crude protein	50.0%
Moisture	5.0%

Cell ingredients

Glutathione (in 100g)	600mg
Choline (in 100g)	320mg
Nucleic acid protein (in RP)	12%

Physical properties

Structure	finely ground product
Colour	light brown
Smell	typical of brewers' yeast
Bulk density	660kg/m ³
